THE INTERNATIONAL SYMPOSIUM ON HUMAN IDENTIFICATION

For more than 32 years, the International Symposium on Human Identification has provided a forum for forensic practitioners to share information about the latest DNA technologies. From modest beginnings, ISHI has grown to be the largest meeting in the world to focus on DNA forensics and its applications to human identity.

More than 1,300 people attended our hybrid ISHI 32 conference in 2021, representing 45 countries.

Topics covered during the general session included:

- Use of Genealogical Databases in Criminal Cases
- Massively Parallel Sequencing
- Likelihood Ratio Software
- Rapid DNA Implementation

This year, two scientific poster sessions will be held in the exhibit hall featuring posters covering all aspects of DNA typing. Optional pre and post-conference workshops will explore leadership in the forensic field, using forensic genetic genealogy to solve criminal cases, probabilistic genotyping, and more.

ATTENDEE PROFILE

Attendees at ISHI are involved in all aspects of DNA typing and come from state, federal and local crime labs in the US and abroad, parentage and testing laboratories, academic institutions, governmental research agencies and policy think tanks. More than 80% of the attendees self-identify as Technical Leaders, Laboratory Directors, DNA Analysts or Scientists.

WHY EXHIBIT AT ISHI
